Experience

Software Development Engineer

April 2025 – Present

Next.js Developer | Codedale

India

- Developed and scaled over 100 robust backend APIs using Next.js and TypeScript, enhancing system reliability for 100k users and reducing response time by 90%.
- Designed and implemented PostgreSQL schemas and Drizzle ORM models handling 20K+ records, optimizing queries and reducing average database load by 60%.
- Engineered 50+ end-to-end features, implementing secure authentication systems and robust data validation for over 10k active users.

Founder & Lead Engineer

Aug 2025 – Present

Next.js And Django Developer | Neylon AI

India

- Founded Neylon AI, an AI agency delivering scalable full-stack solutions and intelligent automation to a diverse client base.
- Architected and built a full-stack platform using a Django backend and Next.js frontend to deliver intelligent automation solutions to clients.
- Engineered a scalable system capable of processing and querying 10GB+ datasets, ensuring high-performance data delivery to an interactive Next.js user interface.

UVCE College

Sep 2024 – Aug 2024

React.js And Node.js Developer

Bengaluru, India

- Developed a unified college website by merging two existing platforms, improving accessibility and user navigation for students and faculty.
- Built an interactive and modern user interface using React.js and Styled Components, creating a dynamic frontend experience.

Projects

CloudMetrics Dashboard | Next.js, Express.js, AWS, Docker

- Designed and developed a full-stack cloud monitoring dashboard using Next.js for an interactive UI and Express.js for the backend API.
- Integrated AWS CloudWatch APIs to visualize real-time infrastructure metrics, providing actionable insights.
- Containerized the application using Docker and deployed it on AWS EC2, ensuring scalability and portability.

AI-Powered Market Sentiment Analyzer | Python, React.js, VPS

View Live | GitHub

- Developed a full-stack sentiment analysis application that processes over 100,000 data points daily from crypto news, social media, and market trends.

- Integrated Natural Language Processing (NLP) using VADER, achieving 85%+ accuracy in sentiment classification (bullish / bearish).
- Built a scalable backend with Flask, handling 500+ API requests per second while fetching data from RSS feeds, Twitter API's and crypto forums.
- Potential Impact: Help traders reduce decision-making time by 30%, improving trade success rates based on sentiment analysis.

MERN Launcher – Automation for MERN Stack Setup | bash, node.js

[View Live](#) | [GitHub](#)

- Developed a CLI tool to automate the setup of a complete MERN (MongoDB, Express.js, React.js, Node.js) stack application with a single command.
- Streamlined the creation of boilerplate code, including frontend/backend dependencies and secure authentication modules.
- Potential impact: Reduces setup time from hours to minutes, enabling developers to kickstart MERN projects with minimal effort.

Feature-Rich eCommerce Platform | React.js, Firebase, Express.js, node.js

[View Live](#) | [GitHub](#)

- Engineered a full-stack eCommerce platform featuring an interactive UI built with React and Styled Components.
- Implemented a secure OAuth authentication system (Google, Facebook) to ensure seamless and safe user access.
- Integrated Razorpay for secure payment processing and Firebase for dynamic product management.

Technical Skills

Frontend: React.js, Next.js, Tailwind CSS.

Backend: Node.js, Express.js, Django, FastAPI, Postman API, Websockets, REST API's.

Databases: MongoDB, PostgreSQL.

Cloud: AWS, Google Cloud Platform, Firebase, Docker.

Languages: JavaScript, Python, C++.

AI Frameworks: Langchain, Langgraph, Chroma DB, Open AI, Google Gemini.

Tools: Git, GitHub, Vercel, Render, Figma, Cloud Run.

Education

University of Vishveshwaraya College of Engineering.

2028

B.Tech in Computer Science.

Bengaluru, India
